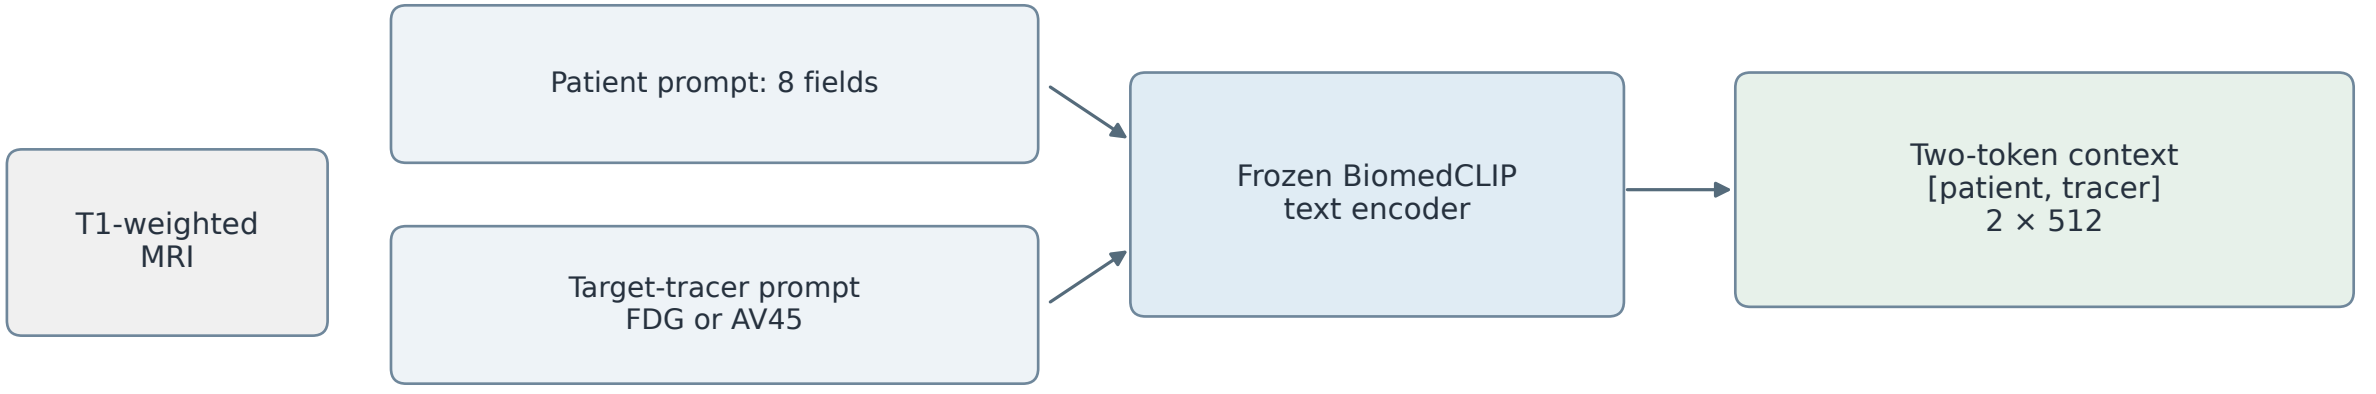
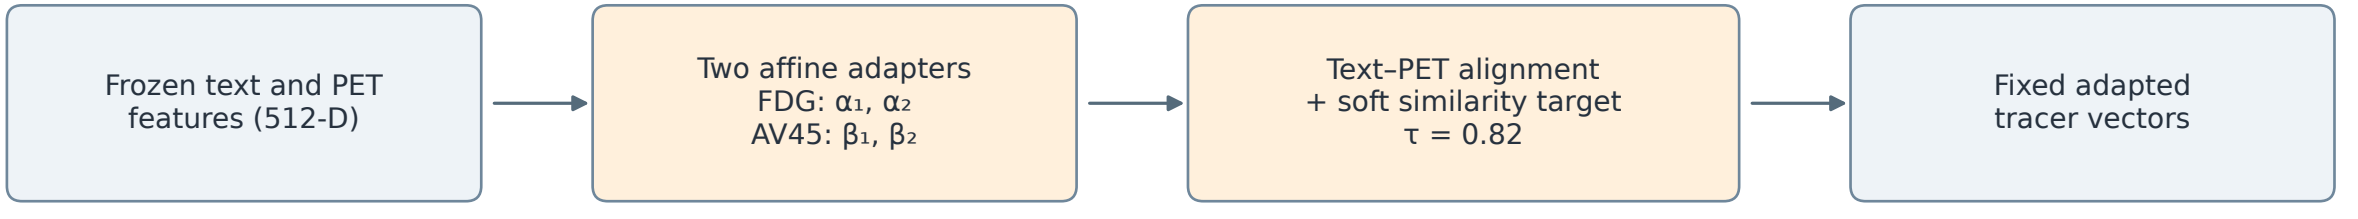
A MRI and fixed text conditions



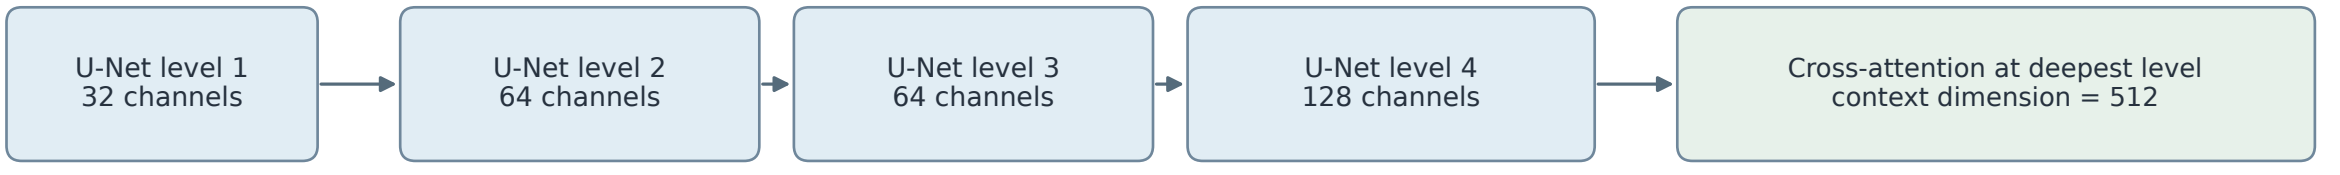
Age, sex, weight, CDR, MMSE, GDS, FAQ, NPI-Q
Clinical scores include diagnosis-conditioned fills.

B Affine tracer adaptation (separate configuration / analysis)



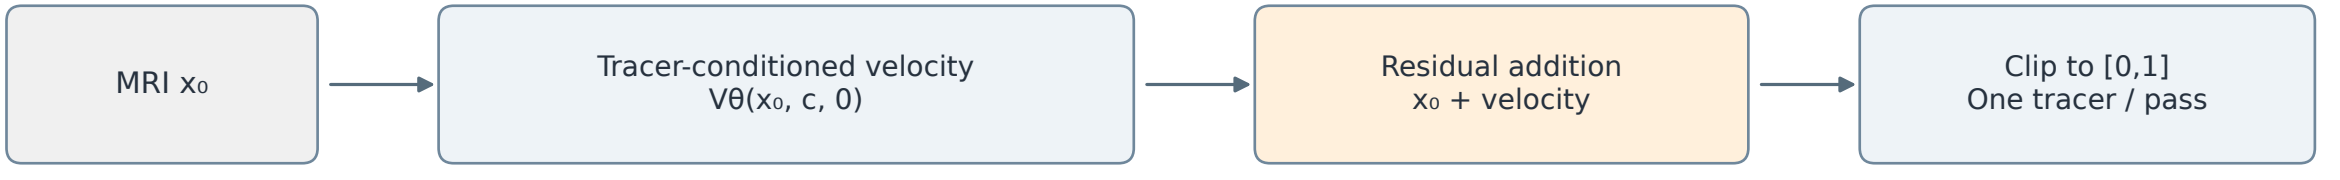
BiomedCLIP weights stay frozen. Reconstructed Full uses raw tracer vectors; adapter results do not establish its generation benefit.

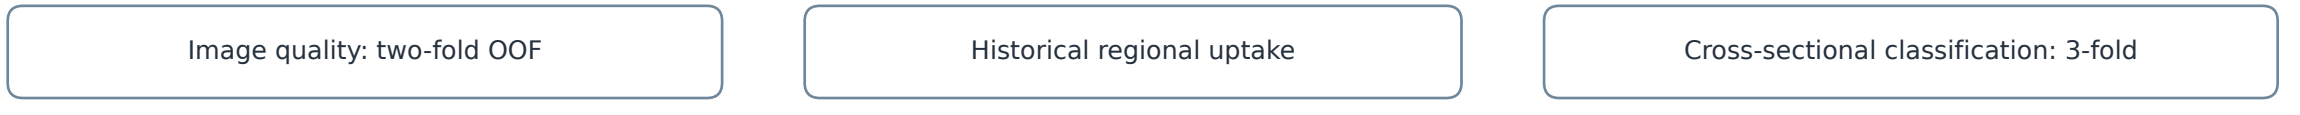
C Shared tracer-conditioned 3D rectified flow



Train on available FDG / AV45 targets only; λF = λA = 1. Timesteps become t = 0 from epoch 140.

D Learned one-step inference



A learned endpoint approximation, not exact ODE integration. Repeat with the other tracer condition to obtain the second PET estimate.


E Evaluation streams
